EAST MULTICENTER STUDY GUIDELINES FOR AUTHORSHIP

The two lead center authors will be either the 1st and 2nd author or the 1st and last author at the discretion of the lead PI. The PI and co-PI from each contributing institution will then be listed, in order of highest study enrollment per center. Up to two authors from each enrolling center will be included. All authors that do not fit on the title line based on the journal of publication requirements should be listed at the conclusion of the manuscript as members of the “EAST Multicenter Study Group on [XXX]” (e.g, the EAST Multicenter Study Group on Retained Hemothorax). If the lead center has 1st and last author then the study group will be listed as 2nd to last (i.e. A, B, C, D, E, F, EAST Multicenter Study Group on [XXX], LAST AUTHOR). This listing of the study group authors at the conclusion of the manuscript allows investigators to define themselves as a co-author of the manuscript under generally accepted rules of academic authorship for large multicenter studies.

The lead PI from the lead center may allow for additional authorship from their own center or other centers that have significant patient accrual or other pre-determined benchmarks. Regardless, the lead PI will discuss all authorship criteria prior to the start of the accrual of any patients. In addition, any important supporting personnel, that do not meet authorship criteria, will be recognized in the Acknowledgement Section.

For subsequent manuscripts which may be constructed, such as subset analyses, the title page authorship may be adjusted according to contribution to that particular examination. Prior to performing a subset analysis, the author should notify the EAST MCT chair to ensure this study is accounted for as well as the original study PI. The results of these subsequent investigations, along with the manuscript should also be shared with all members of the original investigative group. The listing of the “EAST Study Group on [XXX]” at the conclusion of the manuscript, including all original investigators, should also be included in these subsequent reports. This will permit the original investigators to receive recognition of their work in collecting the data and permit them to appropriately list themselves as co-authors of subsequent works under the aforementioned organization.

All authors should fulfill ICMJE criteria (<http://www.icmje.org/recommendations/browse/roles-and-responsibilities/defining-the-role-of-authors-and-contributors.html>).
